Tutorial Session 3

Graphs: Chapters 1-4 from Chapman and Feit's

This week, we will review and discuss all the graphs we've learned so far from Chapters 1 to 4 of Chapman and Feit's book. You can download Chapter 4 accompanying .R code file from the following link: http://r-marketing.r-forge.r-project.org/code.html

1 Part 1

For the First Part of this tutorial download the India data sample called "sample1NFHSaugmentedAnon.csv" and the R markdown called "Tutorial 3- Part 1" from blackboard. Carefully run all the code.

2 Part 2

Download another data sample from blackboard. Create a new file in R studio, load the data and do the following:

1. Can you identify the names of some of the variables in this dataset? Try to understand the dataset.
2. Try to graph something of your interest using as a reference the code from Part 1.
3. If necessary replace some of the variable names with more useful variable names.
4. Does the plot look similar or different as compared to the previous plots?
5. Can you describe the plot that you created in one line?
6. What is the unit of analysis?
7. What is the unit of measurement of the vector you plotted?
8. Now can you repeat the same steps to generate another plot with some other variable from the dataset?
9. Can you describe this plot as well in one line? Discuss the results/ challenges in your group.

Note: This is the process that you could use to create your formative assignments.
For next week, read chapter 5.
